SHIVANI JEEVAN

Data Analyst / AI Workflow Automation

+971 54 4107405 • shivanijeevanp@gmail.com • linkedin.com/in/shivanijeevan • Dubai, UAE

PROFESSIONAL SUMMARY

Senior Data and AI Analyst with 5.5+ years of experience combining financial analysis, business intelligence, predictive modelling, and automation across fintech, banking, and healthcare. Advanced in SQL and Python with experience building Power BI dashboards, scalable analytics pipelines, forecasting solutions, predictive models, and automated workflows using AWS, dbt, Airflow, n8n, and Salesforce. Experienced in FP&A analysis across budget, spend, forecasting, variance, and resourcing, translating complex financial and operational data into actionable insights for senior leadership. Brings practical experience implementing machine learning and GenAI solutions, including credit risk models and an LLM powered financial document analysis application.

CORE COMPETENCIES

- Finance and FP&A: budget and spend analysis, variance analysis, forecasting, scenario analysis, capital allocation, management reporting, executive financial insights
- BI and Reporting: Power BI, Excel, executive dashboards, KPI frameworks, automated reporting, data visualisation, operational reporting
- SQL, Python and Analytics Engineering: SQL, Python, dbt, Airflow, AWS, ETL and ELT, automated analytics pipelines, data quality testing, source to target mapping
- AI, ML and Predictive Analytics: regression, classification, Random Forest, XGBoost, ARIMA, time series forecasting, feature engineering, model validation, AWS SageMaker
- GenAI and Workflow Automation: LLMs, OCR, GenAI applications, n8n, Salesforce, workflow orchestration
- Stakeholder and Delivery: finance and business partnership, requirements gathering, executive communication, analytical storytelling, cross functional delivery, analyst mentoring

CERTIFICATIONS & DEVELOPMENT

- AWS Certified AI Practitioner
- Databricks certification, in progress | Six Sigma Green Belt, in progress

PROFESSIONAL EXPERIENCE

Senior Business Data Analyst, AI & Data | **Mpower Financing** *Dec 2024 to Apr 2026*

Bangalore, India, Remote

- Performed FP&A analysis across budget, spend, forecasts, and resourcing, using variance analysis to identify cost and capacity drivers and provide senior leadership with actionable financial insights.
- Built an AI powered financial document analysis application using OCR and LLMs to extract, classify, and summarise financial documents, replacing manual review with a scalable workflow for business users.
- Developed 3 predictive models for credit scoring, default prediction, and recovery prediction, performing EDA, feature engineering, model validation, and underwriting criteria testing across borrower, loan, and repayment data to improve risk and portfolio decision making.
- Built two n8n workflow automations integrating business rules and Salesforce data to orchestrate loan collections and servicing processes, including delinquency outreach, agent task creation, escalation, payoffs, modifications, and maturity reminders.
- Designed and deployed scalable analytics and reporting pipelines using SQL, Python, dbt, Airflow, AWS, and Alteryx, embedding data quality tests across Salesforce to AWS ETL and reducing manual reporting effort by 60%.
- Owned the end to end data product lifecycle for 3 asset backed securitisation transactions, translating requirements into loan level data definitions, metadata governance, source to target mapping, and collateral pool reporting for investor due diligence and regulatory compliance.
- Analysed customer acquisition and channel performance using SQL, GA4, and CAC metrics, evaluating acquisition spend against customer retention value and translating findings into recommendations for product, data engineering, and business stakeholders.
- Mentored 3 junior analysts through analytical problem solving and work reviews while supporting requirements, validation, release management, and production delivery in a regulated financial environment.
- Partnered with cross functional stakeholders to translate business requirements into analytical solutions, maintain data quality, and support adoption of reporting and data products.

Data & Analytics Consultant | **IFQT** *Sept 2024 to Dec 2024*
Dubai, UAE

- Conducted investment portfolio and time series analysis using SQL and statistical forecasting, providing senior stakeholders with risk adjusted return insights that shaped capital allocation decisions.
- Translated complex analytical findings into executive dashboards, scenario analysis, and decision ready narratives for leadership at a Dubai based financial analytics firm.

Research Analyst, Healthcare Transformation | **NHS <> Lancaster University** *Oct 2023 to Apr 2024*
Lancaster, UK

- Applied biomarker and survival analysis to patient datasets with NHS clinical researchers, uncovering the impact of Troponin levels on cardiac outcomes.
- Translated complex statistical findings into clear visual briefings for technical and clinical audiences, directly informing clinical decision making.

Data Scientist, Operations & Strategy | **NHS Northwest Ambulance Services** *Jun 2023 to Oct 2023*
Manchester, UK

- Tested predictive operational planning by building and evaluating Random Forest regression models for journey, response, and triage time, comparing predicted values with actual outcomes, identifying underfitting with R^2 of 0.23 to 0.45, and defining richer data requirements before deployment.
- Built an on time compliance classifier across 63,940 ambulance cases, achieving 81.6% accuracy and statistically analysing 10,003 false negatives to identify where model risk was concentrated and guide sensitivity improvements.
- Analysed nearest station distance and regional response patterns to uncover critical response time blind spots, generating evidence that informed ambulance positioning and hotspot planning for critical incidents.
- Built Power BI dashboards and analytical data models spanning 5+ operational KPIs, reducing response time analysis from hours to minutes and giving operational managers real time performance visibility.

Software Engineer, Data & Analytics | **Maveric Systems, Client: Citibank NAM** *Aug 2019 to Sept 2022*
Bangalore, India

- Engineered a real time banking transaction processing pipeline using Kafka and Spark Streaming, increasing throughput by 30% while maintaining consistent on time, high quality delivery.
- Queried and validated large scale banking datasets in Hive and Hadoop to support analytics and reporting across North American portfolios, ensuring data integrity for downstream consumers.
- Led migration of BAU analytical datasets and reporting workflows to the Enterprise Analytics Platform, safeguarding data integrity and driving user adoption with zero business disruption.

Business Analyst Intern | **Sable37** *Jun 2018 to Aug 2018*
Dubai, UAE

- Built Power BI dashboards and automated Excel reporting workflows that improved client reporting efficiency and reduced turnaround time.

EDUCATION

MSc in Data Science | Lancaster University, UK | 2022 to 2023
Modules: Machine Learning, Statistical Modelling, Forecasting, Bayesian Methods, Data Visualisation, Model Validation.
BEng in Computer Science | BMS College of Engineering, Bangalore | 2015 to 2019

AI AND ANALYTICS PROJECTS

- ATM Withdrawal Forecasting | Designed a comparative forecasting framework using ARIMA, exponential smoothing, time series regression, and neural networks, achieving below 4.5% error over a two week horizon to support cash replenishment and capacity planning decisions.
- Airline Customer Satisfaction Prediction | Built an end to end Python classification pipeline with XGBoost, feature selection, and cross validation, achieving approximately 96% accuracy and identifying satisfaction drivers for targeted service improvements.
- UK COVID 19 Grant Allocation Analysis | Analysed 74,000+ grant records across 35 features using Python, EDA, statistical analysis, and Random Forest, building a reusable preprocessing pipeline, ranking allocation drivers, and translating regional and sector patterns into stakeholder recommendations.
